Experience

UBS <i>Software Engineer</i>	Aug 2024 – Present <i>Pune, Maharashtra</i>
UBS <i>Intern</i>	Jan 2024 – Jul 2024 <i>Pune, Maharashtra</i>

Education

College of Engineering, Pune (COEP) <i>Bachelor of Technology in Electronics and Telecommunication Engineering; CGPA: 8.39/10</i>	2021 – 2024 <i>Pune, Maharashtra</i>
Institute of Petrochemical Engineering, Lonere (IOPE) <i>Diploma in Electronics and Telecommunication Engineering; Percentage: 99.3%</i>	2018 – 2021 <i>Raigad, Maharashtra</i>
V. H. Paranjpe High School, Mahad <i>Secondary School Certificate; Percentage: 95%</i>	2018 <i>Raigad, Maharashtra</i>

Relevant Coursework

- Data Structures and Algorithms
- Object-oriented Programming
- Database Management System
- Operating Systems
- HTML/CSS
- Embedded System Design
- Data Communication and Networking
- Internet of Things (IoT)

Undergraduate Projects

CardioSync: Real-time ECG Monitoring System with FPGA-Based Signal Processing & Analysis • Designing a real-time ECG monitoring system which will detect cardiac anomalies and will notify locally as well as remotely. • The project has been tested at the Central Railway Hospital, Pune under the supervision of a doctor and has been found to be highly accurate. • The project promises to provide extensive benefits to the healthcare industry.	2024
Anglyser: Digital Goniometer • Development of a highly accurate, cost-effective, lightweight, and user-friendly Digital Goniometer which measures a joint's range of motion. • It utilizes a rotary encoder, a Bluetooth module and an Arduino nano.	2023
Vehicle Tracking and Accident Alert System • A Vibration sensor module detects the vibration of vehicle and sends a signal to MSP430 Launchpad. Then MSP430 fetches data from GPS module and send it to user Mobile Phone via SMS using GSM module. Location of the accident is sent in the form of Google Map link, derived from the latitude and longitude from the GPS module.	2022
Bank Management System • The bank management system project developed in Python has Email verification security feature and offers functionality like money deposit, credit and shows transaction history on user's mail with an Excel sheet. This project's back-end is developed using Python, which provides excellent support for object-oriented programming, making it easier to maintain and expand the system. The front-end system has a user-friendly interface that is developed using tkinter	2022

Diploma Project

Arduino Weather Station • Arduino weather station provides accurately round-the-clock data for the environment. In particular it is based on an Arduino microcontroller board, and it supports a full stuck of sensors for the analysis of the environment. This weather station provides data such as temperature, humidity, darkness, water level, day, date and time, etc.	2021
---	-------------

Skills

Languages: Python, C, C++, Embedded C, Verilog, VHDL, SQL.

Key Skills: VLSI Design, Electronic Circuit Design, Embedded System Design.

Technologies/Frameworks: Microcontrollers, Arduino, Raspberry Pi, Microprocessors.
